

IA: JOURNAL OF THE SOCIETY FOR INDUSTRIAL ARCHEOLOGY

GUIDELINES FOR BOOK REVIEWERS

Paper Submissions:

- Double space all copy except heading
- Use single side of paper only
- Use standard sized paper

Electronic Submissions:

- Send as an attachment to *treynold@mtu.edu*
- The Book Review Editor uses MS Word for Windows and will confirm successful receipt of a review submitted electronically

Content or Review:

Reviewers may not find it possible to adhere to all of the following guidelines, but they should keep them in mind in reading the book and constructing the review:

- The review *should* concisely summarize the contents of the book. Does the author have a thesis? What are the geographical and chronological limits of the study? What approaches does the author take? What sources does the author use?
- The review *should* provide some critique of the book. Is the book well written? Is the book well organized? Are the illustrations of high quality? Are they integrated well with the text? How much of a contribution to knowledge does the book make? Is the book well organized? Does the book meet the objectives the author set for himself or herself in the introduction? Do the contents of the book reflect the title?
- *If possible*, the reviewer should try to fit the book into the field's literature. What does the book contribute to scholarship in IA, or to historical archaeology, or to historic preservation, or to the history of technology? How does it compare to other works in the area?
- The review should avoid jargon. The audience for the journal is a broad and diverse one. Narrow academic jargon will make reviews incomprehensible to many readers and should be avoided, in any case, simply as a matter of good writing. If the use of some jargon is unavoidable, the reviewer should explain the concept in plain English as well.
- Authors *may* indicate the extent to which a book may be of interest to readers of IA, but they should not condemn a work because it does not focus heavily or entirely on industrial archaeology or related disciplines (history, historic preservation, historical archaeology, history of technology, etc.), since authors often intend their works for broader or different audiences.
- Remember to attach a brief biographical note to each review submitted (2-4 sentences) providing information on your present affiliation, publications, current research interests, and the like. Look in the "Contributors to This Issue" section at the back of any issue of IA for examples.

Style of the Review:

- Use the heading provided in the cover letter that arrives with the book. If you think that heading is in error, mark the correction in red and return it with your review or otherwise inform the Book Review Editor

Generally the heading is in the format illustrated below. Note that *IA* headings contain information beyond that usually found on the publication information page in the front of a book (for example, whether the book has illustrations, tables, glossary, notes, bibliography, index, and so on).

Sample heading:

Blown to Bits in the Mine: A History of Mining & Explosives in the United States. By Eric Twitty. Ouray, Co.: Western Reflections Publishing Co., 2001. viii + 208 pp. illus., diags., notes, bibl., index. \$22.95 hb (ISBN 1-890437-14-X)

- If you quote from the book being reviewed, please provide the page number in the following form: Hoskins says of this phenomenon that it is "something that should not have happened, could not have happened, and yet did happen" (p. 34).
- If you quote from another book or article in your review provide a citation in either of the following forms:
 - Book: "John Jones asserted: 'The valve was a piece of beauty, as rare as a blue-eyed dog' (*Destroying Steam Engines*, 1984, p. 34).
 - Article: John Jones asserted: 'The valve was a piece of beauty, as rare as a blue-eyed dog' (*Journal of Popular Culture*, Oct. 1984, p. 34).
- Do not use footnotes
- Please identify acronyms the first time they are used in a review. For instance: "At a paper presented to the SHA (Society for Historic Archaeology), Albert Einstein argued that Gothic steam engines could be modified for operation with turpentine."
